Time: The Familiar Stranger (Tempus)

Synopsis

The culmination of 30 years' work, this book examines classical and contemporary theories and conceptions of time. Fraser explores an expansive range of topics: the origins of the universe, the history of timekeeping devices, the biology of ageing and death, human perception of time, dreaming vs waking reality, expectation and memory, scientists' exploration of time in the physical world, and the ways in which technological rhythms control our lives.

Customer Reviews

Fraser's engaging book presents a discussion of clocks, calendars used throughout history, and time in various cultures. The unifying theme is the difference between psychological time and time in modern physics. Science rejects the concept of time as always having the dimensions of past, present, and future. Einstein suggested objects exist in four-dimensional "spacetime." The author's skill prevents the reader from becoming lost in advanced physics, but on occasion he slips: the solution to Zeno's paradoxes does not work; and Marx did not say time was entirely a social convention. But this is a delightful book. David Gordon, Bowling Green State Univ., Ohio

This book journeys into a realm that few of us spend much effort thinking about. The paradox being that we all are a part of this mass movement. This is an excellent book. Anyone who thinks much

about existence of humanity or reasons of being should read this book. I feel it reveals much about how we choose to live our lives and why we take on the pursuits we do.
