Customer Reviews

The classic text in advanced microeconomic theory, revised and expanded. "Advanced Microeconomic Theory" remains a rigorous, up-to-date standard in microeconomics, giving all the core mathematics and modern theory the advanced student must master. Long known for careful development of complex theory, together with clear, patient explanation, this student-friendly text, with its efficient theorem-proof organization, and many examples and exercises, is uniquely effective in advanced courses. New in this edition: General equilibrium with contingent commodities Expanded treatment of social choice, with a simplified proof of Arrow's theorem and complete, step-by-step development of the Gibbard-Satterthwaite theorem Extensive development of Bayesian games New section on efficient mechanism design in the quasi-linear utility, private values environment. The most complete and easy to follow presentation of any text. Over fifty new exercises. Essential reading for students at Masters level, those beginning a Ph.D and advanced undergraduates. A book every professional economist wants in their collection.

It is just what you would expect: a PhD level, theoretical book on microeconomics. The book often makes more sense than my professor teaching the course. The math proofs are easy enough to

follow--tends to skip lots of algebraic steps, but what advanced math book doesn't--and the pages aren't covered so densely that you cannot focus.

Great Book for students of Economics. To understand the content of the book however, you will need a very strong grounding in mathematics. If your Maths is not good, this is not the right book for you

The book was well written, logical and relatively easy to read (for an advanced Microeconomic text.) The appendices were useful as a refresher and the proofs were sufficiently rigorous without being tedious.

Everything right, thank you

A very good Microeconomics text for a first year graduate student.

good

Very thorough treatment of PhD level microeconomics.

Exactly what you'd expect
