NMR And Chemistry: An Introduction To Modern NMR Spectroscopy, Fourth Edition

Synopsis

Keeping mathematics to a minimum, this book introduces nuclear properties, nuclear screening, chemical shift, spin-spin coupling, and relaxation. It is one of the few books that provides the student with the physical background to NMR spectroscopy from the point of view of the whole of the periodic table rather than concentrating on the narrow applications of ^1H and ^{13}C NMR spectroscopy. Aids to structure determination, such as decoupling, the nuclear Overhauser effect, INEPT, DEPT, and special editing, and two dimensional NMR spectroscopy are discussed in detail with examples, including the complete assignment of the ^1H and ^{13}C NMR spectra of D-amygdalin. The authors examine the requirements of a modern spectrometer and the effects of pulses and discuss the effects of dynamic processes as a function of temperature or pressure on NMR spectra. The book concludes with chapters on some of the applications of NMR spectroscopy to medical and non-medical imaging techniques and solid state chemistry of both $I = F1/2$ and $I > F1/2$ nuclei. Examples and problems, mainly from the recent inorganic/organometallic chemistry literature support the text throughout. Brief answers to all the problems are provided in the text with full answers at the end of the book.

Book Information

Paperback: 400 pages

Publisher: CRC Press; 4 edition (February 19, 2000)

Language: English

ISBN-10: 0748743448

ISBN-13: 978-0748743445

Product Dimensions: 7.4 x 0.9 x 9.6 inches

Shipping Weight: 2 pounds (View shipping rates and policies)

Average Customer Review: 5.0 out of 5 stars 1 customer review

Best Sellers Rank: #110,995 in Books (See Top 100 in Books) #16 in Books > Science & Math > Chemistry > Industrial & Technical #29 in Books > Science & Math > Chemistry > Analytic #141 in Books > Medical Books > Medicine > Internal Medicine > Pathology > Clinical Chemistry

Customer Reviews

If you regularly do NMR it's a very nice reference. Also pretty good as a text book. There are good companion books such as 200 NMR experiments, but that serves a different need.
