# Who Was Marie Curie?

## **Synopsis**

Born in Warsaw, Poland, on November 7, 1867, Marie Curie was forbidden to attend the male-only University of Warsaw, so she enrolled at the Sorbonne in Paris to study physics and mathematics. There she met a professor named Pierre Curie, and the two soon married, forming one of the most famous scientific partnerships in history. Together they discovered two elements and won a Nobel Prize in 1903. (Later Marie won another Nobel award for chemistry in 1911.) She died in Savoy, France, on July 4, 1934, a victim of many years of exposure to toxic radiation.

## **Book Information**

Lexile Measure: 690 (What's this?)

Series: Who Was?

Paperback: 112 pages

Publisher: Grosset & Dunlap; DGS edition (August 7, 2014)

Age Range: 8 - 12 years

Grade Level: 3 - 7

## **Customer Reviews**

Megan Stine has written several biographies for young readers, including Who Is Michelle Obama? and Who Was Sally Ride? She lives in Clinton, Connecticut.

My 4 year old daughter wanted to learn about Scientists. So, we bought her this book. We had read the book called "I am Albert Einstein" a few months back. And after reading this book, my daughter said "Girls can be Scientists too. Just like Marie."

These are great books. All of the Who Was books are excellent for young readers. My daughter gets very excited when she can teach us a little something about history and she seems to truly find things interesting. I think this is a great read for grades 3 and 4

Great brief on history. Missed some key moments but overall well written for younger ages.

I absolutely love this series of books. A must have for any homeschool library.

Bought for the grandkiddos, they love them, thanks!!!!

Cute book for kiddo who keeps asking me questions about Marie Curie!

Was given as a gift. The child loved it.

Sure learned a lot about her.
